

Read the load

CONTEXT

- Shadow dealer, auto-group, 20 Group, vendor, and enterprise workflows.
- Learn the customer decisions each product and data surface must improve.

PORTFOLIO

Inventory Scout, tagging, analytics, marketing, partnership, and internal AI initiatives with owners, dependencies, milestones, and next decisions.

HIDDEN WORK

Observe exception queues, rework, custom analysis, support burden, meeting load, and expert bottlenecks.

OUTPUTS

- Customer-decision map.
- Initiative and dependency map.
- Capacity and friction baseline.
- Decision-rights and cadence assessment.

Install and prove the minimum system

INITIATIVE CONTRACT

Decision, economics, owner, dependencies, capacity, trust conditions, leading evidence, and next decision.

WEEKLY LOAD REVIEW

30-45 minutes on exceptions, blockers, changed evidence, and decisions - not status recital.

EXECUTIVE PORTFOLIO

A simple accelerate / sequence / repair / stop view with forecast confidence and dependency age.

AI CAPACITY PILOT

Choose one stable recurring workflow; preserve human authority and exception handling; measure adoption, throughput, quality, and actual capacity redeployment.

DAY-90 READOUT

- What is clearer?
- Which bottleneck moved?
- Which initiative changed priority?
- What capacity was freed or protected?

Scale the cadence, not the meeting load

QUARTERLY PLANNING

Require economic logic, owner, dependencies, capacity, trust conditions, and evidence - not only a feature list.

FORECASTING

Make milestone confidence and known risks visible; variance produces a decision or learning action.

SCOUT / TAGGING / ANALYTICS

Use a shared evidence language and dependency view across roadmap and operating decisions.

COO LEVERAGE

Resolve more decisions through the operating system and reduce executive context reconstruction.

DAY-120 OUTCOME

Leadership can see and change the portfolio without adding a heavy PMO.
