WEEKLY OPERATING MECHANISM

Initiative Load Review

A 45-minute exception-and-decision cadence for Scout, tagging, analytics, marketing, partnerships, and internal AI.

Purpose: convert status into decisions. Only changed evidence, aged blockers, cross-functional dependencies, forecast variance, and resource trade-offs earn synchronous meeting time.

AGENDA

Minutes	Review	Decision output
0-5	Company priorities and changed assumptions	Confirm what matters this week
5-15	Portfolio posture: accelerate / sequence / repair / stop	Reallocate attention and capacity
15-28	Aged blockers and cross-functional dependencies	Owner, next action, escalation date
28-36	Economics and capacity: delivery effort, repeatability, rework, support load	Protect gross profit and expert time
36-42	Scout / tagging / analytics trust and adoption evidence	Release, hold, repair, or evaluate
42-45	Decision recap	Decision, owner, due date, evidence needed

ILLUSTRATIVE PORTFOLIO SNAPSHOT

Initiative	Posture	Economic load	Critical dependency	Next decision
Scout	Sequence for scale	Capacity / retention / product margin	Data confidence + evaluation + adoption	Which repeated decision earns the next increment?
Tagging expansion	Repair the bottleneck	Onboarding / coverage / recurring revenue	QA throughput + exception ownership	Where does coverage unlock value fastest?
Analytics offering	Prove before productize	Reuse / gross profit / renewal signal	Repeated decision pattern + delivery evidence	What survives real delivery as a repeatable offer?
Internal AI pilot	Pilot with a capacity contract	Capacity / cycle time / quality	Context + human authority + adoption	Is capacity actually released and redeployed?

Illustrative discovery model only. These are not confirmed Foundation Data internal priorities, owners, or statuses.

MEETING INPUTS - DUE BEFORE THE REVIEW

- Updated initiative contract and changed evidence.
- Blockers older than the agreed escalation threshold.
- Forecast variance and the assumption that changed.
- Capacity or delivery-load changes that affect economics.
- A specific decision request when leadership attention is required.

REQUIRED OUTPUTS - LEAVE WITH DECISIONS

Posture	Closure	Consequence	Evidence
Accelerate, sequence, repair, or stop	Owner, action, due date, escalation	Revenue, margin, capacity, retention, or trust	What must be true before the next decision

INITIATIVE CONTRACT

One complete record per strategic initiative

1. Decision the initiative improves

What customer or company decision becomes faster, clearer, more accurate, or more actionable?

2. Economic logic

Revenue, gross profit, retention, capacity, risk, or infrastructure leverage. State the unit and baseline; do not invent a target.

3. Accountable owner and decision rights

One owner. Name required commitments from Data, Analytics, Product, Marketing, Revenue, Finance, Operations, or external partners.

4. Capacity and dependency load

Engineering effort, analytics effort, tagging/QA load, client-delivery burden, support load, vendor dependency, and expected timing.

5. Trust and adoption conditions

Data quality, evaluation, privacy/security, human authority, exception handling, behavior change, support ownership, and fallback.

6. Leading evidence

Cycle time, first-pass completeness, rework, adoption, usefulness, exception rate, support burden, reuse, delivery effort, forecast variance, or another defined signal.

7. Current posture and next decision

Accelerate / sequence / repair / stop. Include the reason, the evidence required, the owner, and the next decision date.

DECISION RECORD

Date	Decision	Owner	Evidence or assumption	Expected consequence	Review date

MEETING HYGIENE

- No status narration that can be read asynchronously.
- No metric without a definition, owner, source, unit, baseline, cadence, and decision use.
- No blocker without an owner, next action, and escalation date.
- No AI pilot without a process owner, human authority, evaluation, adoption plan, and capacity-redeployment hypothesis.
- No initiative remains green merely because activity continues; evidence and decision readiness define health.
